Your decision is generally in the Discover phase when you don't have a well-defined problem, are having trouble stating the problem, or have a problem but have questions about it. **There are three major types of evidence needs you have in the discover phase:**

- **Problem Identification:** What problems do users have? Which users?
- **Problem Understanding:** Why do users have these problems? What is the problem scope? How frequent or intense is it? What do users think about this problem, and how do they solve it today? How are those solutions working? How much do users value having this problem solved?
- **Problem Prioritization:** How big is the market for this problem? How does this problem rank compared to other problems that we could be solving? How does this problem leverage our capabilities and skill sets?

		Observational			Conversational			Testing			Surveys		
		Participant Observation	Ethnographic Research	Heat Mapping	Interviews	Focus Groups	Design Methods	Usability Testing	A/B Testing	Beta Testing	Map-Making Survey	Intercept Survey	Validation Survey
🔍	Problem Identification	★★	★★	★★	★★★★	★	★				★★	★★	★★
	Problem Understanding	★★	★★	★	★★★★	★★	★				★★	★	★
	Problem Prioritization	★	★★	★	★★★★	★★★★	★★★★				★★★★	★★	★★
🛠️	Solution Ideation		★★		★★★★	★★★★	★★★★				★		
	Solution Design		★★		★★★★	★★★★	★★★★	★★					
	Solution Validation		★		★★	★★	★★	★★	★				
📊	Solution Value		★		★★★★			★★★★	★★	★★		★	★
	Solution Usability	★★	★	★★	★★			★★★★	★★	★★		★	★
	Solution Discoverability			★	★			★★★★	★★		★	★★	
🚀	Performance			★	★★	★		★★	★★★★	★★	★	★	★
	Satisfaction				★★	★		★★	★	★★★★	★★★★	★★★★	★★★★
	Disruption	★★	★	★★	★★	★		★★	★★		★	★	★

We can observe some trends from this chart:

- **Observational methods are key for early insights** but less effective for identifying specific problems. These methods are ideal for gathering context and understanding broad trends during the initial stages of research. They often need to be combined with other techniques for more targeted problem-solving.
- **Conversational methods excel in early stages** but their effectiveness declines post-Design phase. In the Develop phase, structured methods like usability testing are preferred for more focused user feedback.
- **Interviews offer value across all stages** due to their adaptability. They can be tailored for both broad ideation and specific feedback, making them universally effective throughout the research process.
- **Testing is crucial for later stages**, focusing on user actions over opinions. In the Develop and Deploy phases, observing user behavior is paramount, as it directly impacts the value created by new features or products, beyond mere attitudinal feedback.
- **Surveys are effective at the beginning and end of the research spectrum**, useful for identifying broad user trends in the Discover phase and evaluating user reception in the Deploy phase. While they gather extensive user perspectives, subtler individual nuances may be overlooked.
- **Surveys and conversational methods are complementary**, often used together for a balanced approach to qualitative and quantitative research. They help in forming and validating hypotheses about user attitudes, with surveys summarizing broad trends and conversations offering deeper insights.

		Observational			Conversational			Testing			Surveys		
		Participant Observation	Ethnographic Research	Heat Mapping	Interviews	Focus Groups	Design Methods	Usability Testing	A/B Testing	Beta Testing	Map-Making Survey	Intercept Survey	Validation Survey
